A majority of ECAD errors can be resolved by making sure your files are up to date with what is available. For users with internet, files should automatically updated whenever updates are released. Manually updating all files can be done by running the 'ESYNCFULL' command at the AutoCAD command line. Once this command has finished executing, restart AutoCAD and test if that has fixed the issue. For users without internet access, the most recent updates for ECAD can be accessed from <u>KI Furniture Symbols</u> by downloading **Encompass CAD Update (latest release)** and installing the file.

KI Furniture Symbols

#### AutoCAD & Revit Symbol Search Toolkit

Right-click and Save link as... to download symbol to your computer. Files shown with a \*dwg extension are individual AutoCAD symbols that contain BOTH 2D & 3D information (when shown). Be sure to THAW all the AutoCAD Layers to view the 3D components of the symbol. Note: Tags do not reflect true product designation.

Revit families are highlighted red and are a collection of Revit \*rfa files and \*txt Type Catalogs. Type REVIT in the Keyword search to retrieve a list of all available Revit families.

- Seeing output that looks similar to this is frequently caused by missing blocks. Try running the 'ESYNCFULL' command and make sure you are connected to the internet

 Missing support files are caused by missing corresponding AutoLisp (.lsp) file. Try running 'ESYNCFULL' command.

Unable to verify file errors appear occasionally when reloading menus. Click 'Always Load' to all
of these popups

- Unhandled exception error when opening an insertion interface. Click "Continue" and ignore the error. It should resolve itself as soon as you insert a product from the interface

- AutoCAD Fatal Error messages when editing text elements occur due to an issue with certain hardware and software associated with AutoCAD.

- Temporary fixes include:
- Typing 'MTEXTED' and entering 'notepad' as the default editor for MTEXT elements
- Typing 'DTEXTED' and entering 1
- The above are temporary fixes that avoid the issue without actually fixing it. Please contact the KI helpdesk by sending an email to <u>helpdesk@ki.com</u> for further assistance
- ECAD2013 Error 5, occurs when ECAD is unable to find SQL information (likely due to the user being offline)

• Select 'Yes' on the window that appears to turn on SQL
